First Steps In LaTeX

Synopsis

Are you in a hurry? A friend received a letter from the American Mathematical Society (AMS) informing him that his paper had been accepted for publication in the Proceedings of the AMS. If he submitted it as a \LaTeX document, it would be published in 20 weeks—any other format would take almost a year before the appearance in print of the article. The friend had \LaTeX installed on his computer on Friday, borrowed the manuscript of this book, and mailed a \LaTeX version of his article to the AMS on Monday. *First Steps in \LaTeX* is for the mathematician, physicist, engineer, scientist, or technical typist who needs to quickly learn how to write and typeset articles containing mathematical formulas. A quick introduction to \LaTeX and the AMS enhancements is provided so that you will be ready to prepare your first article (such as the sample articles on pages 53-54 and 67-69) in only a few hours. Specific topics can be found in the table of contents, the Quick Finder, or the index. While the index is \LaTeX -oriented, the Quick Finder lists the main topics using terminology common to wordprocessing applications. For example, to find out how to italicize text, look under italics in the Quick Finder. Setting the stage Watch someone type a mathematical article in \LaTeX . You will see how to type the document using a text editor to create a \LaTeX source file.

Book Information

Paperback: 136 pages

Publisher: Birkh user; 1999 edition (June 2, 2010)

Language: English

ISBN-10: 0817641327

ISBN-13: 978-0817641320

Product Dimensions: 7.5 x 0.4 x 9.2 inches

Customer Reviews

This rather inexpensive book is an excellent introduction to \LaTeX and \AMSLaTeX . While the author boasts that a friend of his typeset a mathematics article in one weekend with a copy of the

book manuscript--a dubious claim that could not possibly be true except for the simplest of articles--it is still a nice first book on the macro language. In a lot of ways it is like "Learning LaTeX" and has similar coverage. I like that one too. If given the choice, I'd have to pick one of these two or Diller's book to start. Diller, though longer and more comprehensive, is just as easy to understand and may be the choice for the person with needs more ambitious than producing that weekend article.

This is basically just a subset of Gratzner's larger book. Not to say this book isn't good, but it's worth spending a few extra dollars to get the complete book.

Definitely very helpful booklet for starting up in LaTeX and this book teaches you how to write LaTeX document in very efficient and neat way, while the book is less than 100 pages (excluding appendixes and indexes)! You can grasp the basic idea and begin writing LaTeX document in 3 days if you are working pretty hard on that! Very nice book for beginner!

This is a very helpful booklet if you want to get into LaTeX and AMSLaTeX fast. The author teaches you to construct your own article in LaTeX in very natural and efficient way. The book is less than 100 pages which means you can grasp the basic idea of LaTeX in 3 days if you are working on it pretty hard. Great book if you want to learn LaTeX!
