## Customer Reviews

After trying multiple math curricula both in the public school arena and in home schooling our son, we were amazed by the ease of teaching with Saxon math. The textbook proper is broken down into 120 lessons, 20 tests and the occasional investigation. Each day the child reviews a "math facts" worksheet, which is basically a drill page of 40-60 math facts, either addition, subtraction, multiplication or division. We were amazed at what the repetition of these math facts did for our son, both in math skill and in confidence. The goal is to do each one in 5 minutes or less, and he loves to time himself to continue improving his score! After the math facts come mental math, 7-10 questions that you do with your child in your head. They are easy enough that it is not too challenging, and the math book teaches you the tricks of how to do math in your head as you work through the curriculum. My favorite part of the curriculum is the way they teach each subject. Having successfully completed math classes through Calculus II in college, I never considered myself to have trouble with math. But some of the curricula we used for math had me scratching my head trying to understand what they wanted our son to do. Saxon breaks down each piece of math into small, bite-sized pieces. Each lesson explains one small piece and the student then practices that piece. After every new subject, my son says "that sure is easy." The other thing I really like about Saxon is

the way they continue to review past subjects until they are mastered...and I mean mastered! In each lesson there are 7-12 new problems on the new topic. Then there is a 30 problem work set that reviews old concepts so that he doesn't forget how to do things.

You should purchase this book if you already have one complete kit and you are teaching more than one student, like I do. The 3 stars are not targeted at the content, which is FIVE STARS in my view, but at the VERY CONFUSING marketing of these items. The cover of this book says Saxon Math Homeschool (sic!) but this is ONLY the Student/Teacher Text. You will not be able to teach your child math if all you buy is this book. There should be THREE items in a complete package: a Student/Teacher manual (this one), the Solutions manual and the (reproducible) Tests and Worksheets. If you have one kid, buy the COMPLETE kit. If you have 2 or more kids, you should buy one complete kit and as many extra student/teacher books, such as this one, as you may need. If you do not have the ability to copy the worksheets, which is LEGAL, then you should also order additional Tests and Worksheets books. However, for one child, you will end up paying A LOT more if you bought these items individually. Having 2 kids, and this is my experience for the past 5 years, from 3d to 7th grade, I order the complete kit from an education bookseller or from [Amazon](#) if I could find it here and an extra textbook from [Saxon Publishers](#) or one of the alternative sellers supported by [Saxon Publishers](#). By the way, Saxon's Math works. I am not a home schooler because I have a full-time job but I've been using it with my kids since 3d grade as a Math booster and I am happy with their A's. Besides math, children acquire some discipline, study skills, test-taking skills and, me having 2 'students', they learn to compete as well. \_\_\_\_\_ On the Saxon method: A one-year Math cycle is comprised of 120 lessons, 12 investigations and 23 review tests.
