I Beat Cancer Holistically: Protocols For Breast, Colon, Lung And Prostate Cancer

Synopsis

Did you know the medical community only treats the symptoms of cancer, and it is your responsibility to treat the cause? In May 2005, Daniel Goldstone received the shock of his life when he was diagnosed with advanced prostate cancer. Nine months after traditional treatment, his cancer returned with a vengeance-the tumor was growing at 300 percent a month. After researching all the other traditional treatments, which gave him a 29 percent chance of surviving another four years and would drastically reduce his quality of life, he decided to take an alternative route. Today, Daniel is 100 percent in remission due to his holistic approach. His previous book, *Advanced Prostate Cancer and Me*, has helped many people around the world beat prostate cancer but, over the course of the years, he has discovered that with a few modifications his five main ingredients are just as effective for breast, colon and lung cancer as well. In 2011, he recruited people with different stages of cancer to test the effect of his protocol and the results were tremendous, which motivated him to do this book. Daniel's mission "or calling" in life now is to help others beat the beast!

Book Information

Paperback: 90 pages

Publisher: Wasteland Press (October 30, 2012)

Language: English

ISBN-10: 1600477836

ISBN-13: 978-1600477836

Product Dimensions: 6 x 0.2 x 9 inches

Shipping Weight: 4.8 ounces (View shipping rates and policies)

Average Customer Review: 3.9 out of 5 stars [See all reviews](#) (11 customer reviews)

Customer Reviews

Daniel J. Goldstone is a financial planner who was diagnosed with Stage 3 prostate cancer in 2005. He initially sought advice from several cancer specialists and was dismayed by the treatment options available to him. Not only were the traditional treatments radical, the side effects would wreak havoc on his ability to live the life he wanted to live. After doing additional research on holistic

treatments, he chose to undergo hormone treatment, external radiation, and supplement with holistic methods to battle the disease. As he details in the book, Goldstone's cancer went in to full remission and remains at bay to date. Goldstone writes about the specific treatments he chose and why and ultimately wrote this book after recruiting others to try his methods. He has received positive feedback from many individuals who used his protocols and was driven to write this book to further spread the word. Goldstone's premise is simple: the human body will heal itself if it is given the tools to do so. Cancer is a sign that the body's immune system is in disrepair and he advocates boosting it by making changes in your lifestyle and diet. He has done research on how cancer is treated around the world as well as looking at certain cultures where cancer occurs much less often than in the United States. The book is a short, simple formula for treating breast, colon, lung and prostate cancer, although individuals who have not been diagnosed with cancer can benefit from Goldstone's research by utilizing some of his methods to guard against cancer as well. His principles are sound and he includes scientific papers on cancer treatment and prevention at the end of the book for additional reading.

Actually I didn't buy this book for learning about Cancer, when I already own at least 30 Cancer books mostly bought after my wife went through a Breast Cancer Surgery, but instead I bought it for reading the story told by a person who saved his life by not blindly trusting a doctor; actually the Drug sellers. But after now having finished the book I in the future will be showing it to persons who have been diagnosed having Cancer, or when discussing with persons who blindly are believing the Hospitals telling them that Surgery, Chemotherapy and (bad) Drugs are the only way to fight Cancer. During my life I among other always have been interested in Biology - and actually went on studying for being a doctor, but was thrown out because of political speeches, and then instead ended as engineer - and now own around 300 health/doctor books. But when my Thai wife 3 1/2 years ago, at her yearly breast scanning, showed up having Breast Cancer, actually only consisting by a single Tumor of less than 1/3 Inc. (7 mm), she was told that she had to go through a Breast Surgery, as fast as possible, I was informed when she had returned home. But by my looking at the scanning, and the papers, I told her that she had months of time to think about the case, in either just having removed the small Tumor, or for example first trying totally in changing her eating to the optimal and watching if the Tumor would stop growing and start decreasing. The two Thai Doctors, who she had met alone, just after the scanning, one of them, educated in Sweden, and only about 35 years old, had told her that in few days, by Surgery, both of her Breasts had to be removed, or else she would die in less than a week!
