Do you like trick questions? Well the Drill Questions at the end of each chapter are full of them. Trying to learn and refresh myself on all of this after 5+ years since doing it last is hard enough, which is why parts of this book are EXTREMELY frustrating. Allow me to briefly explain: Chapters 2-8 each focus on an area of the College Math course respectively. At the end of each chapter (some of which are 20-30 pages of concepts) there are 10 Drill Questions from the section simulating ones from the actual exam. Most of the questions are very helpful, but a solid amount made me want to throw the book across the room. Many of the drill questions require you to know something that is completely MISSING from the book. For example at the end of the geometry one of the questions is: "Which of the following CANNOT be the lengths of the sides of a triangle?" I won't reveal the answer, but the choices are (A) 2, 5, 6 (B) 3, 4, 5 (C) 4, 5, 6 (D) 4, 5, 10. This problem requires understanding the Triangle Inequality Theorem (the sum of two lengths of a triangle must exceed the length of the third side), but is not explained or included ANYWHERE in the entire book. After spending hours straight teaching myself the concepts of a chapter, feeling dumb when I couldn't figure out a problem like this one, and eventually giving up only to realize I couldn't isolate an answer because it wasn't taught to me. They might as well have asked, "Pick a letter: A, B, C, or D." Then wondering to yourself, "pick a letter? Did I miss a section? Maybe if I use a formula..." Then reading the Answer that says, "The answer was C because whenever you're asked to randomly pick a letter, it's always C."
