Synopsis

Help get your little one excited about learning! This colorful, 32-page Preschool Basics workbook presents activities that will help prepare your child for success in kindergarten. The content covers skills so important at this level, in a simple, uncluttered format. Each page is designed to be child-friendly with charming illustrations. Because children are not expected to write at this age, the activities do not require this skill. Its a fun and attractive activity book. Pictures and colors are child-friendly. Activities doesn't involve writing at all, which make it a good choice for some 3 year old. First 9 pages a 3 year old might be able to do since is to circle the smaller,bigger,different or same pic. Pag 10 - 11 is a big coloring page where child should do following directions. After here i think an older kid, as ages 4-6, will have better comprehension and/or show you where she/he need more practice. pages 12-17 involve better comprehension of concepts as opposite and belong. Pages 18-25 beginning sounds. Pages 26-29 is the number section where the child should know to count 1-10 to do it and have an idea of addition. 30-31 is a simple "follow the pattern" activity.

My 3 1/2 year old daughter really likes this book, and does well. I am not happy with the directions

on each page, and usually "read" her my own version, but otherwise we like it. She is eager to turn the page and find out what comes next, and these lessons are right on target with her learning capacity/stage. The first few pages are "which is bigger, which match" etc, and this has helped us to identify that our daughter needs work with spatial differences. It has also helped to develop her lines to become straighter and stronger. I would buy this book again!

I purchased this for my 3 1/2 year old son and he loves it. The Preschool Basics from School Zone has been great for developing his prekindergarten skills. Although it is only 32 pages it has bright colors with good graphics that keep him interested. The pages are not perforated but tear out easily.

Could not expect more from this book. My 2 1/2 year old loves this book. I pulled book apart so we could do a page from each section of book each day... like a set of letter pages and set of number pages and set of tracing pages... I mean such a good book.

My daughter loves little work books and these are great for us to take along with us on doctor appointments or anywhere else she will have to wait like a restaurant or something. Helps kids work on the basics they will need to know before starting kindergarten and also start practicing for what kids learn in kindergarten, might give your kiddo a head start! If you want to be able to re-use it for the next child, you can laminate the pages or slip them into a clear page protector and tape it shut, then give the child a dry-erase marker or crayon to complete the activity. Then you just wipe it clean.

My almost-3-year-old adores this book. She was requesting "work" like her big brother, who is homeschooled, and this is just perfect. She asks to "circle things" every day. She can do 3-4 pages at a time. It does take parental involvement because you have to read the instructions, which change every few pages. So far, she has been able to understand everything with just a little bit of guidance. I love that it is mostly circling or drawing lines to connect things. There is no tracing, which she really doesn't even need to be doing this early.

I am a stay-at-home mom and I purchased this book for my 3 year old. What I enjoy most about this book is that it is simple to follow as an adult and gives clear and straight to the point directions for each activity. It contains many patterning exercises and differentiating between same and different, which makes it very useful since these are pre-kindergarten exercises. My daughter really looks forward to working in this book each day and another good aspect of it is that it does not require any writing; all

she has to do is point. This book is set up very nicely in the beginning it is easy activityâ™s and it slowly progresses to more difficult activities.

I ordered this for my 4 year old to reinforce what he is learning in preschool. He was actually very excited to get it! It covers object sizes, colors, numbers, beginning sounds, opposites, differences, classifying, rhyming and counting. I would recommend photocopying the pages so that it can be used more than once. I let my son go to town on the book itself and now he has completed it and we have no more use for it.
