Rescue Pilot : Life-Saving At-Sea Navy Helicopter Missions

Synopsis

'Dan McKinnon, extraordinary helicopter pilot, brings alive the excitement and occasional terror of rescue at sea. An exciting hair raising and reverting tale of the largely untold story of helicopter rescues at sea' - Neil Armstrong, Astronaut. 'Just Great. It's going to be of tremendous interest to all naval helicopter pilots present and future and to the people who want to know more about this aspect of military flight. Boy, you've unleashed a flood of memories' - Bill Stuyvesant, legendary navy helo pilot. A daring Cold-War warrior recounts the thrills of high-sea helicopter rescue missions. Within the pages of "Rescue Pilot" distinguished naval aviator Dan McKinnon brings to life the dramatic at - sea helicopter rescues he participated in during his anything but peaceful 'peacetime service' in the United States Navy from 1956 to 1959. Helicopter flight itself, not to mention vertical-lift rescue and evacuation was in its infancy at that time, so pilots like Dan had to 'learn as they go', executing daring at-sea rescue missions from air carrier flight decks. Rough water, treacherous weather and risky cold-war conditions were all part of a day's work. Along with dramatic rescues, you'll participate in ship-to-ship replenishments, pick-ups and transfers, mine detection, and radar calibration operations. Dan also provides fascinating insider glimpses of peacetime naval life, long periods at sea, survival training, early helicopter technology, flight deck operation, and an incident-by-incident account of the U.S. Navy's involvement in the Formosa Strait crisis. In "Rescue Pilot" Dan McKinnon skillfully interweaves technical and historical information with his own thrilling real-life experiences ...and tells a story as only a man who has put his life on the line to save others can.

Book Information

Paperback: 280 pages

Publisher: McGraw-Hill Professional; 1 edition (April 25, 2002)

Language: English

ISBN-10: 0071391193

ISBN-13: 978-0071391191

Product Dimensions: 5.9 x 0.8 x 8.9 inches

Shipping Weight: 9.6 ounces

Customer Reviews

The public became aware of US Navy helicopters during the space program when single engine piston H-34s and its successor, the twin-turbine Sea King, were brought onto the international stage during astronaut recovery missions. Well, helicopters weren't always so capable. Beginning in the early 1950s, the Paisecki HUP was the standard fleet rescue and utility ship. The author tells his story of flying the small, under powered ships during a variety of missions including a massive rescue effort to rescue shipwreck survivors. While primarily a story of one pilot's career, it will also remind the reader of the limitations of early helicopters, which makes his (and other pilots of the period) rescues all the more heroic.

Great Book, tells of the everyday life of a U.S. Navy Piasecki HUP-2 Retriever Helicopter pilot and his experiences flying this Helicopter. The pilot of the HUP-2 Retriever Helicopter had to concentrate 100% of the time in flight to the sounds the helicopter was making, The attitude the helicopter was in and flying the briefed mission. No auto rotation or auto pilot like the Modern Day SH-60 Seahawks have, The HUP-2 Was all sight, sound, and feel, The Pilot was flying the helicopter 100% of the time. With a regular crew of just two. The pilot in the left seat and an officer or enlisted crew member in the right seat, The pilot had little time to make written notes on his kneeboard and often had the other crewman write the notes for him. If a rescue was being performed the other crew member has to fold the right seat out of the way, open the rescue hatch (below the right seat), and operate the rescue hoist located above the right seat and the rescue door. There was no rescue swimmer in those days if the person being rescued could not climb in to the rescue sling, rescuee was most likely left for dead and the pilot would continue his flight. NOTE: The rotor blades are Spruce wood with aluminum leading edges. While Reading this book, I gained first hand knowledge of the Piasecki HUP-2 Retriever Helicopter by being a volunteer at the USS Midway Aircraft Restoration Hanger at NAS North Island. The Piasecki HUP-2 the Midway got came from Edwards Air Force Base in July of 2009, and the volunteer artisans performed extensive work to make the HUP-2 a show quality museum aircraft. The Piasecki is due onboard Midway in April 2011.

This is real life. Not fiction. Refreshed my memories having done similar a year or two earlier. I have much more respect for the Utilities detachment people as a result of reading this book. Ah, the good old days....
