Customer Reviews

For the past 14 years an extremely close friend of mine has had many unexplainable symptoms (lack of smell, muscle cramping, choking, extreme abdominal pain with nausea after eating fiber or fat-rich foods, etc.) This November 2015 I noticed a resting tremor in the arm on his left side. This was the first time I suspected his issues were related to one disease which might be Parkinson's Disease (PD). However, I still dismissed this possibility because tremors can be related to other medical issues (one of which is benign) and he has only had this tremor three times. Periodically over the past several months I noticed him walking slower, a frozen facial expression, and his right hand curled in front of him as if he had a stroke. On Dec 5, 2015 he really exhibited the slow walking, frozen face, and curled hand and he took forever to dress that morning. Later that evening I

became certain (in my opinion) that he has PD due to his telling me about a change in his handwriting which I did not witness. Unfortunately, he refuses to go to the doctor or seek medical help from a neurologist even when I told him I believe he has PD. On extremely rare occasions he'll go to see a particular specialist for whatever ailment is almost killing him at the moment. As a result, since December 2015 I've completely immersed myself in learning about PD with some cursory investigation of illnesses that exhibit Parkinson-like symptoms because I wanted to be sure I was on the right track. Besides searching the Internet for information, I purchased seven (7) books on Parkinson's Disease (PD) of which this book is one.
